## 4. Absolute Maximum Ratings (Ta=25°C)

### 4.1. Electrical Absolute Maximum Ratings (GND=0V,Ta=25)

Item	Symbol	Min.	Max.	Unit	Note
Power Supply Voltage	VDD	-0.3	4.0	V	1,2

#### Notes:

1. If the module is operated above the absolute maximum rating, permanent damage may occur. Operating outside the recommended voltage can lead to module malfunction and poor reliability.
2. VDD>GND must be maintained.

### 4.2. Environmental Absolute Maximum Ratings

Item	Storage		Operating		Note
	MIN.	MAX.	MIN.	MAX.	
Ambient Temperature	-30°C	+80°C	-20°C	+70°C	1,2
Humidity	-	-	-	-	3

1. Operating below the minimum recommendation can lead to slower response time.
2. Background color changes slightly depending on ambient temperature. This effect is reversible.
3. Ta<=40°C: 85%RH MAX.  
Ta>=40°C: Absolute humidity must be lower than the humidity of 85%RH at 40°C.

Note1: Measurements are made after LEDs have been turned on for 15 minutes. LCM displays full white. The brightness is the average value of 9 measured spots. Measurement equipment BM-7 ( $\Phi 5\text{mm}$ )

Measuring condition:

- Measuring surroundings: Dark room.
- Measuring temperature:  $T_a=25^\circ\text{C}$ .
- Adjust operating voltage to get optimum contrast at the center of the display.

Measured value at the center point of LCD panel after more than 15 minutes while backlight turning

Note 2: The luminance uniformity is calculated by using following formula:

$$\blacktriangle B_p = B_p (\text{Min.}) / B_p (\text{Max.}) \times 100 (\%)$$

$B_p (\text{Max.})$  = Maximum brightness in 5 measured spots  
 $B_p (\text{Min.})$  = Minimum brightness in 5 measured spots

Note 3: The definition of viewing angle:

Refer to the graph below marked by  $\theta$  and  $\Phi$ .

Note 4: Definition of contrast ratio.

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance with all pixels "white"}}{\text{Luminance with all pixels "black"}}$$

Note 5: Definition of Response time. (Test LCD using DMS501): The output signals of photo detector are measured when the input signals are changed from "black" to "white"(falling time) and from "white" to "black"(rising time), respectively. The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure below.

Note 6: Definition of Color of CIE Coordinate and NTSCRatio.

Color gamut:

$$S = \frac{\text{area of RGB triangle}}{\text{area of NTSC triangle}} \times 100\%$$

## 9. Precautions for Use of LCD Modules

### 9.1. Handling Precautions

- 9.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- 9.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth. If the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
- 9.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
- 9.1.4 The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- 9.1.5 If the display surface is contaminated, blow a breath onto the surface and gently wipe it with a soft microfiber cloth. If still not completely clear, moisten cloth with one of the following liquids:
- Isopropyl alcohol
  - Ethyl alcohol
- Liquids other than those mentioned above may damage the polarizer. Especially, do not use the following:
- Ketone
  - Aromatic solvents
- 9.1.6 Do not attempt to disassemble the LCD Module.
- 9.1.7 If the logic circuit power is off, do not apply the input signals.
- 9.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
- Be sure to ground the body when handling the LCD Modules.
  - Tools required for assembly, such as soldering irons, must be properly grounded.
  - To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
  - The LCD Module is coated with a film to protect the display surface. Be careful when peeling of this protective film since static electricity may be generated.
- 9.1.9 During transportation, avoid violent shocking and vibration. Prevent excessive crushing force and exposure to direct sunlight.

## 9.2. Storage Precautions

9.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.

9.2.2 The LCD modules should be stored under the storage temperature range. If the LCD modules are stored for a long period of time, the recommended condition is:

Temperature: 0°C ~ 40°C

Relative humidity: ≤80%

9.2.3 The LCD modules should be stored in the room without acid, alkali or harmful gas.
